Andrea Brezanova is a 41 y.o. female presenting with

Chief Complaint

Patient presents with

- Wound Infection

Infection on back of neck. Pt reports that is has improved, but is still not resolved.

She was seen one week ago for an infected boil at the neck and was started on doxycycline which she has been taking as prescribed. She believes it is improved but it came to a head and has been draining pus. She denies fever. There is mild tenderness.

Current Outpatient Medications

Medication

- doxycycline monohydrate (MONODOX) 100 MG capsule

No current facility-administered medications for this visit.

No Known Allergies

ASSESSMENT/PLAN:

1) infected boil

- * continue with doxycycline
- * wound was flushed with normal saline; pus was excised. Wound packed with sterile gauze and covered with 2 x 2 with tape
- * Pt to avoid immersing wound underwater
- * can change overlying gauze but not packing
- * follow up in 2 days for recheck, changing packing and dressing
- * may need referral to general surgery once healed

No orders of the defined types were placed in this encounter.
