MASSACHUSETTS GENERAL HOSPITAL AFFILIATE

Assessment & Plan

Assessment and Plan:

1. Furuncle of neck (Primary)

1. Furuncle of neck (Primary)

Wound check completed. Wound is healing well, no s/sx of infection. Will require ongoing wound care to ensure healing. Wound flushed with NS, packed with gauze strip and covered with sterile gauze, tape. Pt educated on wound care and advised to change dressing daily at home. Advised to follow up for wound re-check in 7-10 days, sooner if s/sx of infection (reviewed new purulent drainage, increased surrounding redness, fevers, chills).

Subjective

Subjective:

This 41 y.o. female patient presents today for re-packing of neck wound. She was seen in clinic and dx with furuncle on neck with soft tissue infection. Wound was packed with gauze and pt instructed to follow up in the clinic for re-packing. Pt reports no new concerns with the wound. She has left the dressing in place. She was concerned that leaving gauze in the wound would not allow the wound to heal. She denies new drainage, fevers, chills.

HPI

Review of Systems

There is no problem list on file for this patient.

Social History

Social History Narrative

- Not on file

No family history on file.
