 Behavior: Behavior normal.

Wound looks good with good granulation tissue, no signs of infection.

Plan:

Problem List Items Addressed This Visit

None

Visit Diagnoses

Furuncle - Primary

She will finish with the doxycycline. She will keep this area clean and dry and return on Sunday to have this rechecked and repacked. If she notices any increased pain, drainage or fevers she will follow-up earlier.

Follow-up appointments:

No future appointments.

I have used electronic speech recognition to prepare this document. The transcription errors which may arise from this process are unusual and can easily evade proofreading. For example, short words such as "not" may simply be omitted - completely changing the meaning of a sentence. Please beware such errors and do not hesitate to call me for anything which does not make sense.
